## Huebsch

Huebsch now offers vended laundry owners eBoost technology on the HC60, a 60-pound frontload washer-extractor with Galaxy 600 control system.

The Huebsch HC60 is ideal for owners looking to provide customers with easy-to-use washers that also help their stores run as efficiently as possible and maximize revenue, according to the company.

Huebsch's new eBoost technology makes washer-extractors more efficient by using 33 percent less electrical energy and 11 percent less water than two-speed models. It also includes the patented Water Guardian leak detection technology to eliminate wasted water and resources by detecting leaks in the drain and fill valves.

In addition, eBoost technology spins up to 200 G-Force, removing more water from the loads, providing reduced dry times and gas costs.

Built on a computer-optimized, all-welded structural steel frame, the HC60 is designed to be stronger than ever to provide reduced sound and vibration levels. Its dual triple-lip seals and stainless steel shaft collar deliver a strong line of defense in protecting bearings from the damaging effects of moisture.

With Galaxy 600 control on the HC60, owners can increase their revenue with easy programming for multi-level vend and time-of-day pricing. Additionally, they can quickly monitor and program their equipment from a PC or laptop and receive performance data and alerts via e-mail. These features enable laundry owners to manage multiple stores at once.
