FRONT LOADERS

HUEBSCH

H

uebsch® offers vended laundry owners the HCN080, an 80-pound front-load washer-extractor with eBoost™ technology and Galaxy™ 600 controls. The large-capacity machine helps customers wash bulky items such as bedding and winter attire.

Washer-extractors with eBoost are energy-efficient, using 33% less electrical energy and 11% less water than two-speed models, says the company. The technology also includes the patented Water Guardian that detects leaks in both the drain and fill valve, eliminating wasted water and resources.

The Galaxy 600 control provides multilevel vend pricing as well as time-of-day pricing to help a Laundromat owner increase traffic during slow times. The Galaxy-equipped machines also feature eight cycle modifiers, including Extra Wash and Extra Rinse cycles.

Owners can retrieve machine data using a PDA or laptop with the Galaxy 600. Easy programming and information retrieval provides tools to help a laundry owner manage multiple Laundromats, Huebsch says.
