

HUEBSCH

Huebsch offers the HT050, a 50-pound tumble dryer designed to meet the needs of medium- to large-scale on-premises laundry (OPL) applications.

A key feature of the HT050 is reversing technology, which allows the machine to stop, pause and then switch direction, Huebsch says. This helps reduce the balling or roping of large articles, such as sheets, comforters and tablecloths, during drying. Balling or roping causes the center of the linen to be less dry than the outside. The reversing feature provides consistent, even drying of the laundry.

The machine also features a large door opening for quick loading and unloading. This, coupled with a self-cleaning lint screen, will enable laundry staff to get more loads done and increase the overall throughput of the operation, Huebsch says.

Machines are available with

[Huebsch]

the Galaxy 600 control system, which allows laundry managers to reduce energy and labor costs with features including 30 programmable cycles and Over-dry Prevention Technology (OPT). Additional user-friendly features include a one-touch cycle repeat, automatic anti-wrinkle extended tumble and time-remaining display.
