H

uebsch recently announced an expansion to its washer-extractor product line, adding the HCN100, a 100-pound front-load washer-extractor with eBoost™ technology for vended laundry owners.

The large-capacity washer-extractor takes up the same amount of room as an 80-pound machine, the company says, making the HCN100 an easy replacement.

Huebsch's new eBoost technology also is available on the HCN100, allowing the machine to use 33% less electrical energy and 11% less water than two-speed models. The technology also includes patented Water Guardian leak detection, which detects leaks in both the drain and fill valves, eliminating wasted water and resources.

With the Galaxy™ 600 control, Laundromat owners are able to set multi-level vend prices, tailor wash cycles, and combine with a card payment system. Owners can retrieve machine data using a PDA or laptop with Galaxy 600. Easy programming and information retrieval provides owners the tools to manage multiple Laundromats, Huebsch says.
