

HUEBSCH

H

uebsch recently announced the introduction of its vended reversing 75-pound tumble dryer.

The new addition to Huebsch's product line will allow Laundromat owners to charge more for use of a specialty tumbler, while offering a

solution for those who also manage commercial accounts, as well as pickup and drop-off services.

The new tumbler is equipped with reversing technology, which allows the machine to stop, pause and then switch direction. This helps reduce balling or roping of large articles, such as sheets, comforters and tablecloths. The reversing feature provides a consistent and even dry of the laundry.

The machine is available with the Galaxy 600 control for tumblers, a complementary control to the Galaxy 600 washer-extractor control, Huebsch says. The dryer control features advanced programming options to modify the machine's cycles and up charge for certain features, such as temperature or time, and time-of-day pricing.
